

Definition

- This system allows an individual numbering, specific to each label.
- Different types of numbering are available.
- The numbering is generated by computer.

Technical information & application

- Compatible with offset or gravure printing
- Up to 12 digits can be used for the numbering, plus 3 digits for a prefix.
- The numbering is printed with a black ink.
- The dimension is generally of 3 mm in height and 2.7 mm in width per digit.
- There has to be a window for the printing of the numbering, with an unprinted area between the border of the window of 3 mm North/South and 6 mm Left/Right.
- The printing of the numbers will be run based on a file from the customer (list of codes) in TXT format.
